## CIRC VET Project

# THE VALIDATION PROCESS IS GOING TO START!

Materials for the training course “**Circular Economy Expert in Sustainable Plastic Products**” prepared by the partners and tested during the piloting phase, **have been revised and completed**. They are now ready to be used for the validation phase of the course.

During the last Steering Committee of the project, hosted in Berlin on 8th and 9th October by **Kunststoff Institute Ludenscheid (KIMWQ)**, the partners decided to set the beginning of the validation process both with companies during the next project meeting, which will be organized and hosted by **Proplast** during the third week of February 2025, in Alessandria (Italy) and students.

This last one will be organized firstly in Germany, but the period of the year has to be confirmed yet. These two workshops will be a sort of “shared inspiration” for the rest of the partners that will have to replicate the same type of workshops in their own countries.

Each partner will coordinate a workshop in their own country, using their own language. The partners in charge of the organization of the workshop with companies are Proplast in Italy, Centimfe in Portugal, Polymeris in France, AIJU in Spain and LINPRA in Lithuania. On the other hand, the partners that will have to set up the workshop with students from universities and VET centers are APRC&VPM in Lithuania, ULPGC in Spain, HIT in Italy, KIMWQ in Germany and AIJU & Centimfe in Spain and Portugal.

## HOW WILL THE VALIDATION BE STRUCTURED ?

The validation process means that companies and students from Universities and VET centers will be able to test and use the whole material, prepared during the project, in the languages of the partners (German,

Portuguese, French, Spanish, Italian, Lithuanian and, of course, English) on the [e-learning platform](#). The material has been prepared and developed using different supports, i.e. videos, power point presentations and pdf files with indication of used references and sources.

Furthermore, the validation will be organized in a blended mode (in presence workshops and online). Consequently, the participants will have the opportunity to take part in the workshops, and in addition, they should become familiar with the e-learning platform developed ad hoc by the **CIRC VET** French partner **Infinitivity Design Labs**.

All materials developed in the project are FREE for every participant who wants to have the opportunity to enjoy it. Stay informed about the workshops and you will be able to benefit from them.
